

WooCommerce feeder

This guide will show you how to use the WooCommerce feeder to automatically import products from your website.

Start by going to the Feeder tab, then click New Feeder.

Enter your endpoint URL, which is your website address.

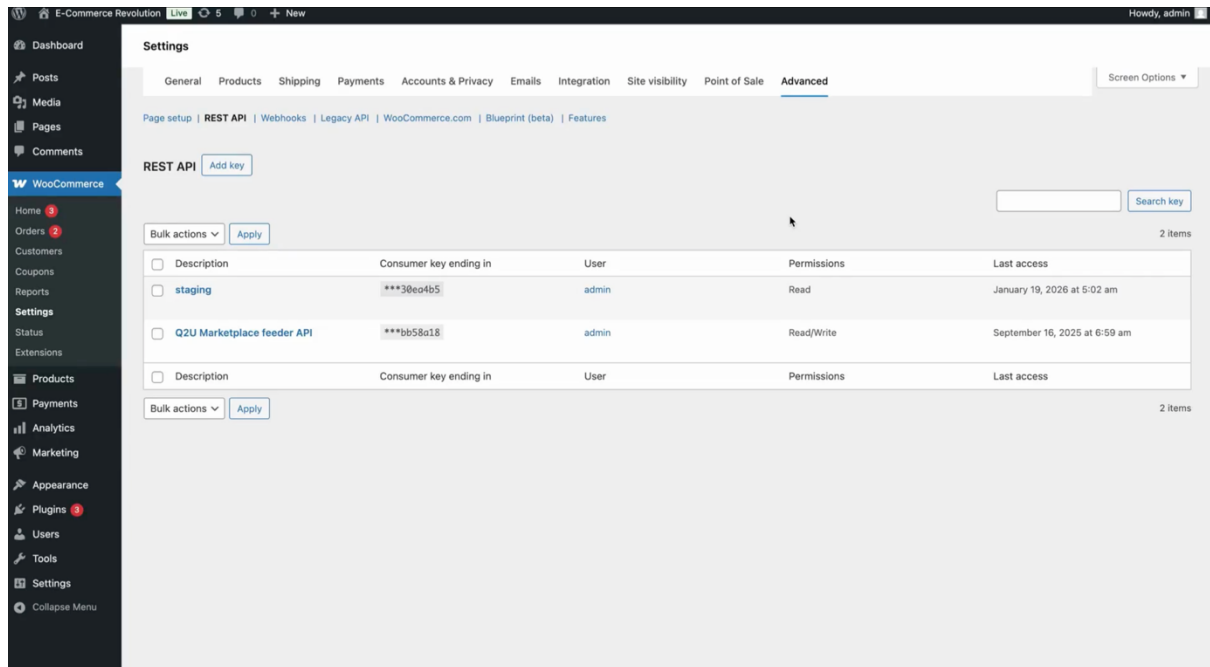

Now we'll create your consumer key and consumer secret.

Switch to your WooCommerce Admin dashboard.

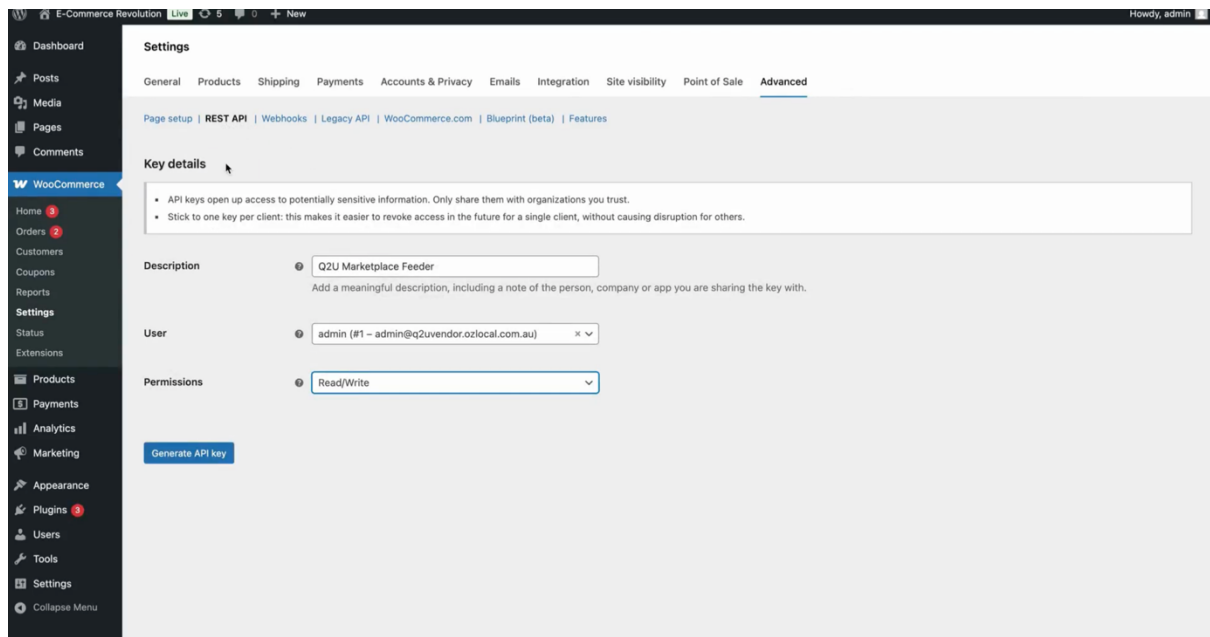

In the left menu, go to WooCommerce, click Settings, then choose Advanced.

Select REST API

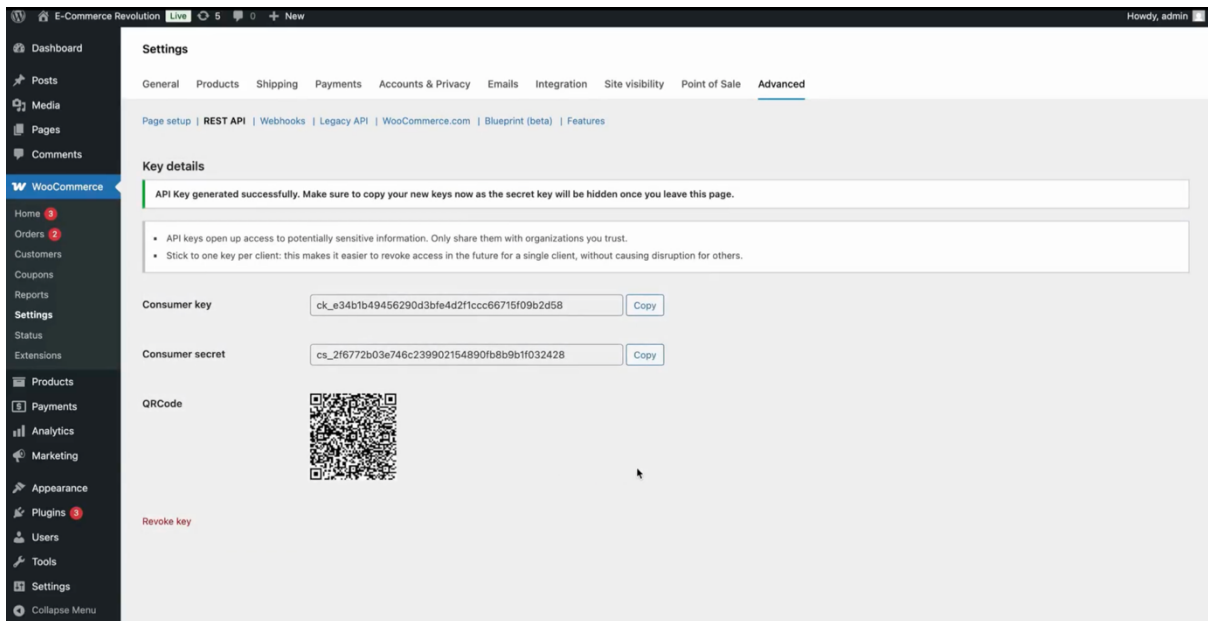

Click Add Key.

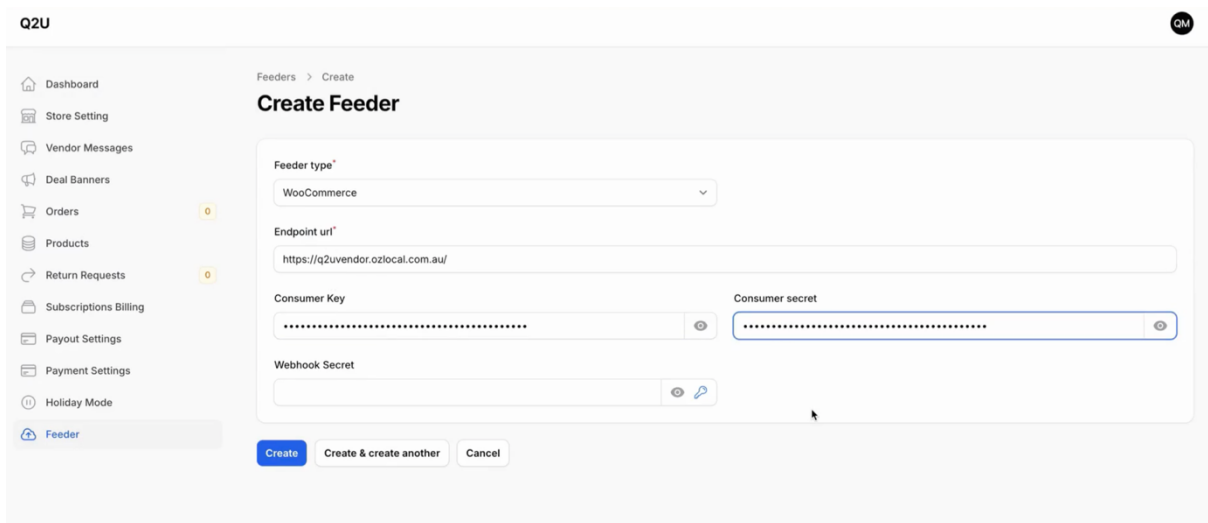

Enter a description, confirm the user and set permissions to Read and Write.

Click Generate Key. You'll now see your consumer key and consumer secret.

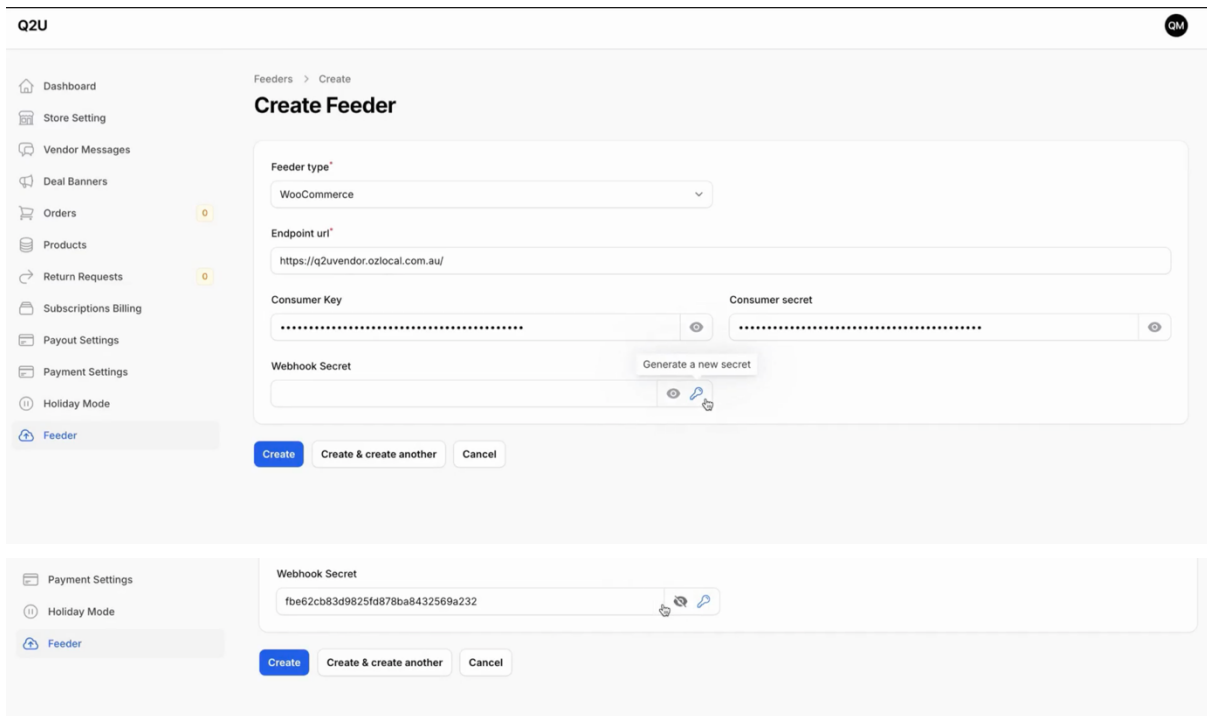

Copy both and paste them into the matching fields back in Q2U.

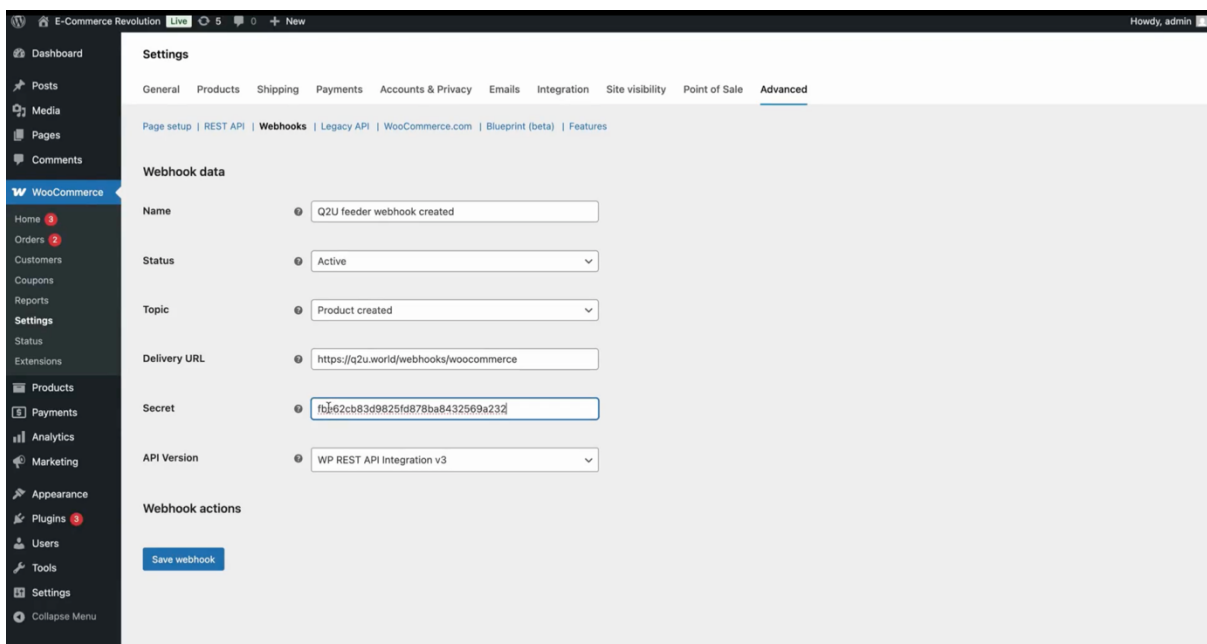

Next, we need to set up two web hooks in WooCommerce.

In Q2U, click the blue key icon to generate your web hook secret

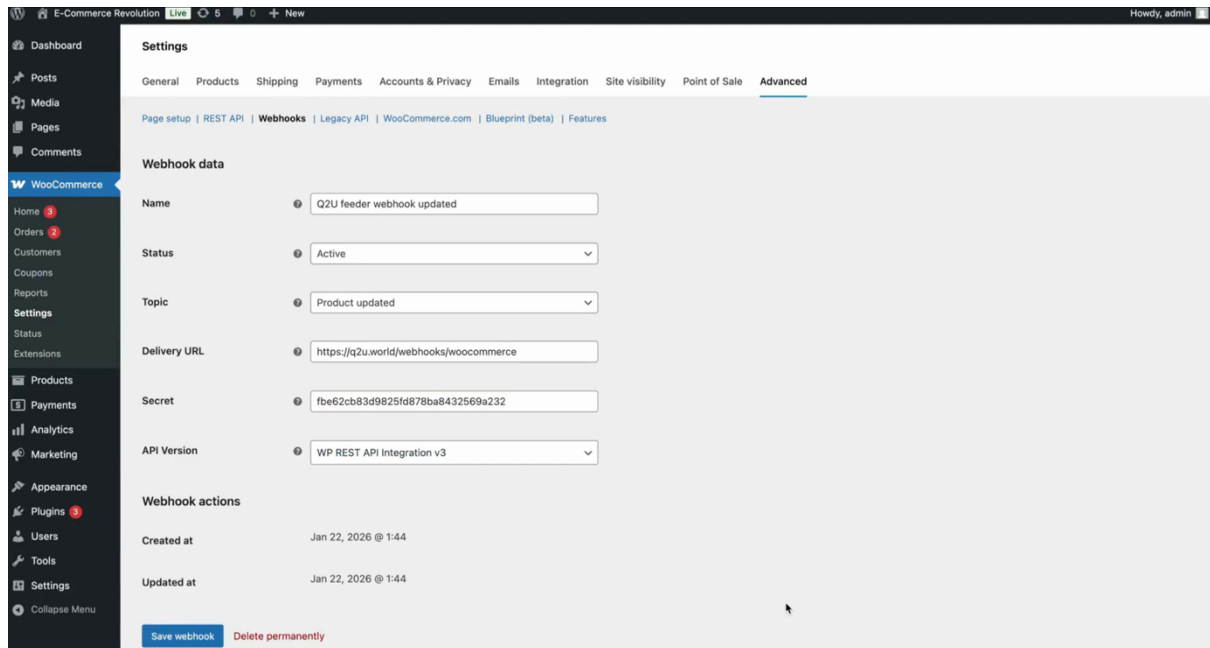

Return to WooCommerce, click Webhooks, then select Add Webhook, enter a name, set the status to Active, and choose the topic "Product created."

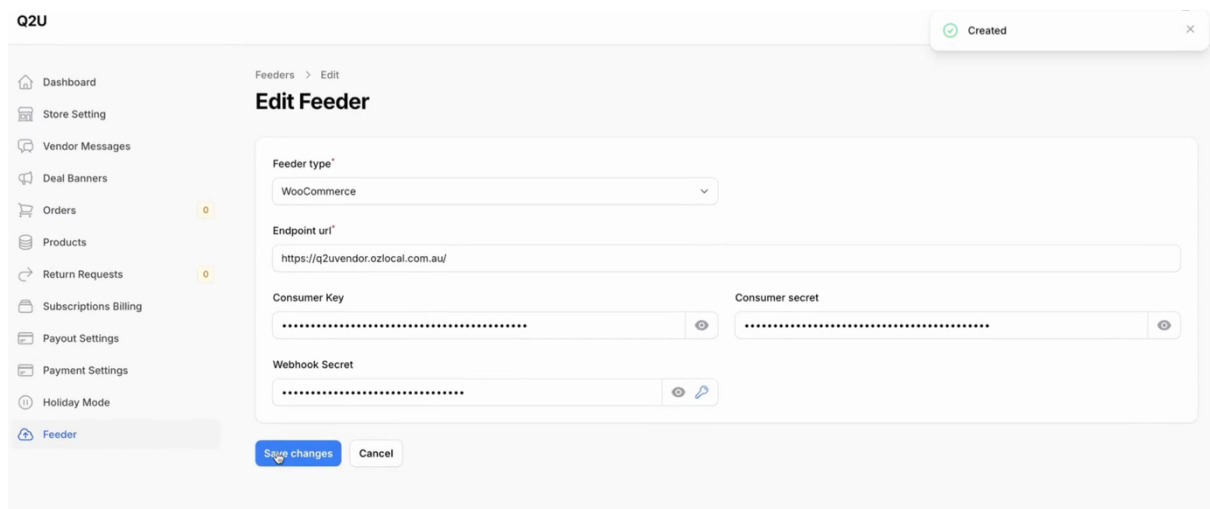

Enter <https://q2u.world/webhooks/woocommerce> as the delivery URL and paste in the webhook secret from Q2U, then click Save Webhook.

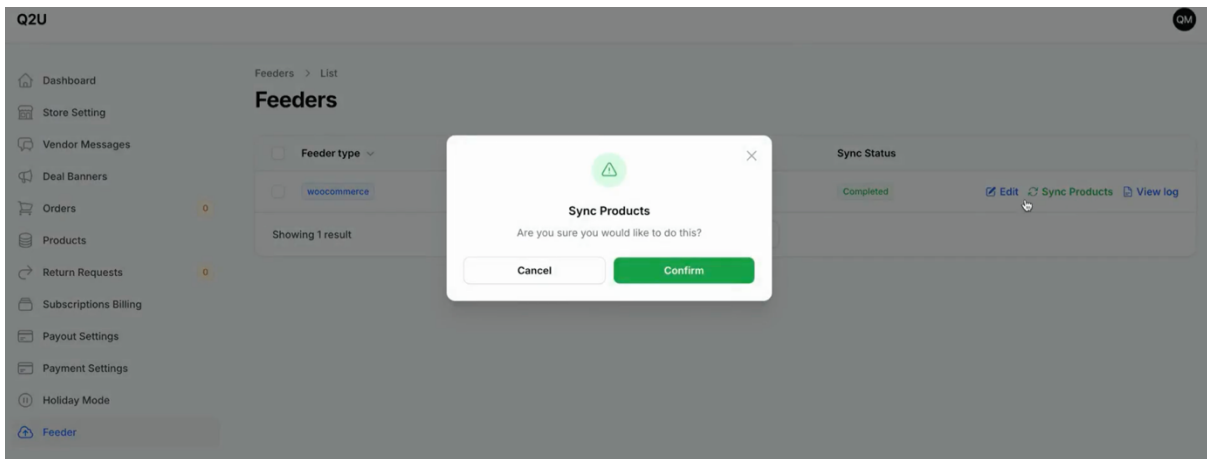

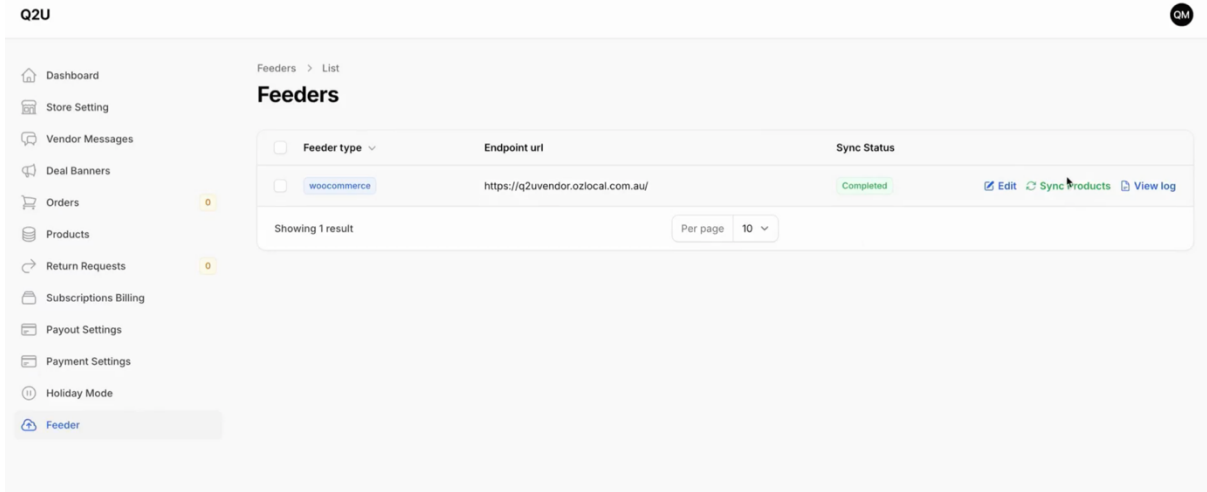

Repeat this process again, but this time set the topic to “Product updated”.

Once both webhooks are created, return to Q2U and click Create to finish setting up your feeder.

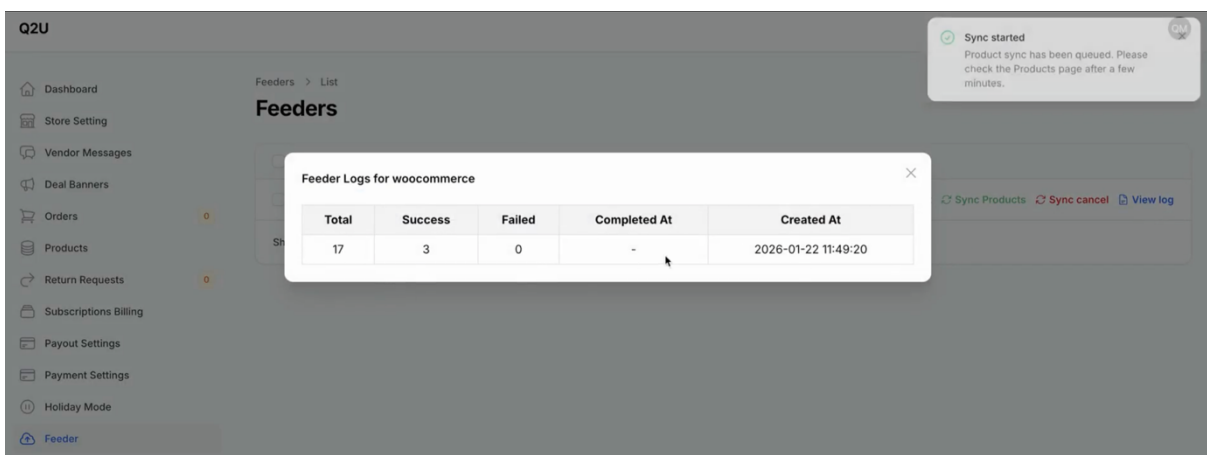

You're now ready to sync your products. Click Sync Products and then confirm to begin the import.

This may take a few minutes depending on how many products you have.

You can click View Log to see the import results.

If any products appear as draft, it means some details are missing and you'll need to update them before making them active.
